# Sustainability & Innovation in Agriculture

**Dr Suzie Newman, Director**

**International Development Unit, Plant & Food Research**

The New Zealand Institute for Plant and Food Research Limited

## Our mission

To create the world's most sustainable food production systems

# Locations

NEW ZEALAND

AUSTRALIA

USA

# Our research

Future plants,  
fish and foods

Sustainable  
resilient food  
supply

Blue skies  
science for  
Growing  
Futures™

# Our capabilities

Sensing technology

Total utilisation

Food safety

Biosecurity and crop protection

Soil, water and climate

Crop optimisation

Supply chain optimisation

Conservation and ecology

Seafood production

**Dairy**

**Sheep and beef**

**Broad acre cropping**

**Horticulture**

**Forestry**

Drivers of change	Category
Competition for land and water use	Environmental
Severe acute and chronic weather events	Environmental
Access to water	Environmental
Access to capital	Markets
Trade barriers (trade miles / carbon border adjustments)	Markets
Global demand for indigenous products	Markets
New technology advances (accelerated technology capability in alternative proteins, dairy and products - growth of hybrid agri-economy)	Technology
Sustainable farming and nature-based solutions and practices	Technology
Changes to labour force demand and supply	Social
Changing consumer behaviour (demand / preferences / expectations)	Social
Land use change	Policy
Urbanisation of population and growth of cities	Policy

Goals	Objectives
 <p data-bbox="800 147 1156 222"><b>1. Enhanced knowledge and capability</b></p>	<p data-bbox="1289 147 1939 222">Climate change adaptation knowledge, skills, and case studies are accessible for the sector.</p>
 <p data-bbox="800 408 1014 484"><b>2. Effective investment</b></p>	<p data-bbox="1289 408 1964 576">Capital is available and used effectively towards adaptation with embedded good governance to build resilience, change practices, reduce risk, and support stakeholders.</p>
 <p data-bbox="800 675 1149 751"><b>3. Strategic use of data and technology</b></p>	<p data-bbox="1289 675 1926 801">Actions and implementation are empowered through the capture, analysis, and integration of relevant data.</p>
 <p data-bbox="800 936 1026 1012"><b>4. Industry-led innovation</b></p>	<p data-bbox="1289 936 1921 1105">The sector takes advantage of innovative opportunities, such as ecosystem services and modern genetic technologies to lead the sector's adaptation response.</p>
 <p data-bbox="800 1198 1123 1273"><b>5. Collaborative and resilient leadership</b></p>	<p data-bbox="1289 1198 1959 1366">Leadership embraces diverse voices, generates meaningful outcomes, and works towards the same goals both within the sector, and across the whole food system.</p>

**Ag Matters case study**

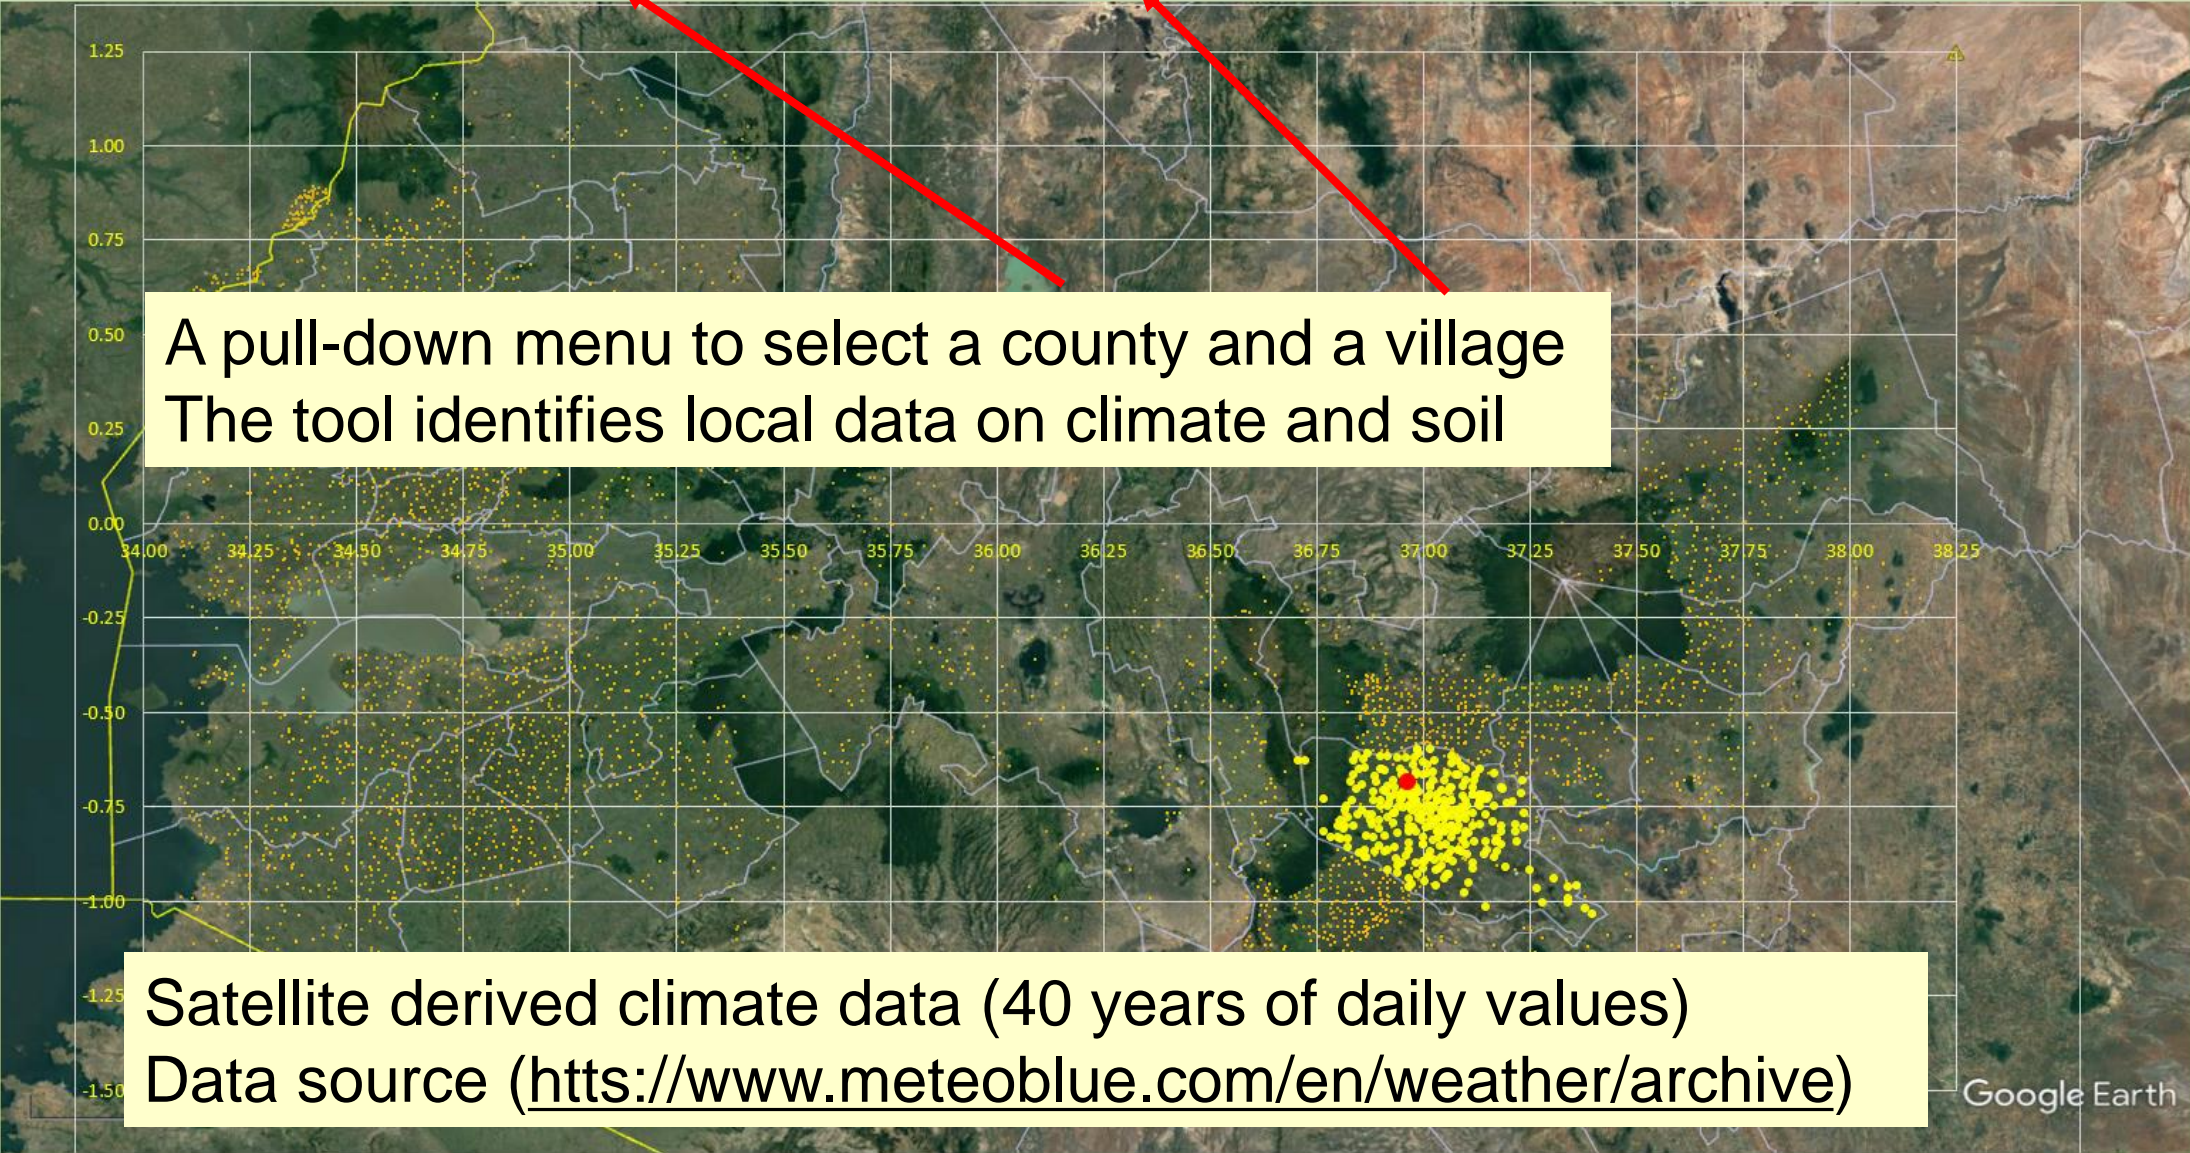

# The landscape...

# A model for tree water use

Step (1) Select County  Step (2) Select a village  Latitude  Longitude  Elevation

A pull-down menu to select a county and a village  
The tool identifies local data on climate and soil

Satellite derived climate data (40 years of daily values)  
Data source (<https://www.meteoblue.com/en/weather/archive>)

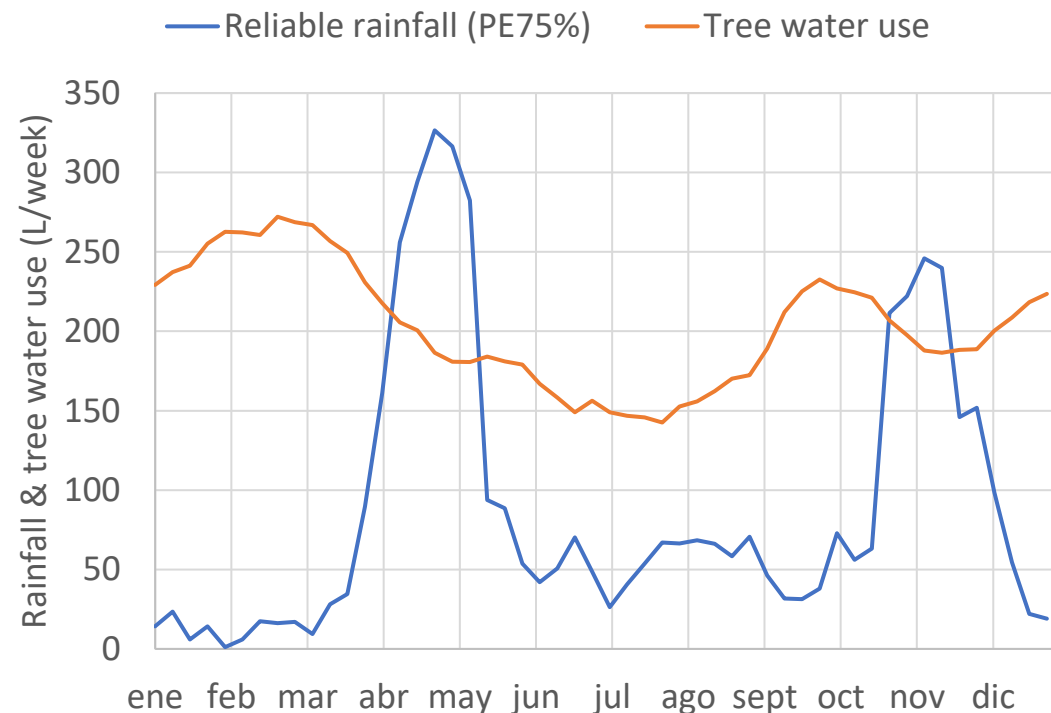

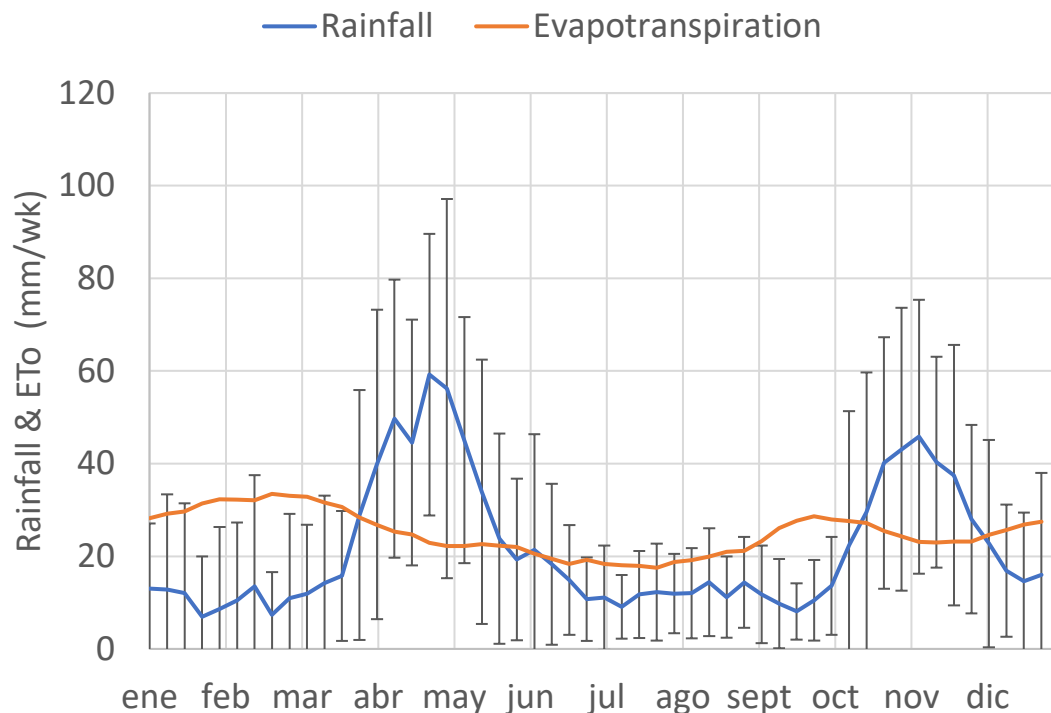

Tree water use depends on

- Tree size and shape
- Leaf area (and density)
- Microclimate
- Soil water availability
- Crop load, tree health ...

# Climate & Tree water use (weekly)

## Irrigation needs (L/tree/day)

Statistics	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Annual
Mean	20	24	13	0	0	0	6	6	16	0	0	7	8
PE25%	30	32	27	0	0	10	13	12	21	11	0	20	14

# Vanilla production cycle and possible of climate impact

Little or no flowering 2016 to 2021
